## Horizontal Right Functionality on the 2/4TXC-BC3HCA Coils

We have added functionality and greater flexibility on our existing 2/4TXC-BC3HCA line of coils. The 2/4TXC-BC3HCA coils can now be used in the **horizontal right** application, in addition to the current upflow, downflow, and horizontal left applications. The model numbers will not be updated – the 13<sup>th</sup> digit “C” which distinguishes airflow configuration will now include horizontal right in its meaning.

To apply coils in the horizontal right configuration, modifications must be made. Please reference the Installer’s Guide for detailed instructions and illustrations.

This functionality can be applied to all 2/4TXC-BC3HCA aluminum coils in stock.

Because of the update in the 2/4TXC-BC3HCA functionality, the 2/4TXC-BC3HMA will no longer be produced. The following coils will be phased out as inventory is deleted.
